

CDMA/EV-DO Network Deployment

Bridgewater's Subscriber Data Broker™ provides a sophisticated subscriber data management system serving all subscribers and applications. Service providers can create a unified view of subscribers, accelerate time to market for new services and leverage a robust, scalable platform for service innovation in CDMA networks.

The Bridgewater® Service Controller is the most proven, scalable, and robust solution of its kind. It's widely deployed and proven in tier-1 CDMA service provider networks to provide a three-fold increase in performance. The Service Controller is proven in deployments serving 70M+ subscribers, and supports more than 14B transactions per month to back end billing systems for a single customer. The Service Controller supports extensive optional support for prepaid and postpaid billing models.

The Bridgewater® Policy Controller enables CDMA operators to control network resource usage and application authorization to support fair usage and casual user service models.

Bridgewater's WideSpan® 5000 system is Bridgewater's integrated portfolio enabling true mobile personalization in high growth mobile data transaction environments. Anchored by Subscriber Data Broker, a sophisticated subscriber data management system, WideSpan integrates the entire Bridgewater mobile personalization portfolio including the Service Controller, the Policy Controller, and the Bridgewater® Home Subscriber Server in a highly-scalable, carrier-class blade server platform.
